-!- TISSUE SPECIFICITY: Highly expressed in brain, particularly in cerebellum and pons.
-!- INDUCTION: By retinoic acids (RA).
-!- SIMILARITY: BELONGS TO THE CYTOCHROME P450 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bourne S., Bauer C., Pape K., Jones T.;
Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: Plays a key role in retinoic acid metabolism.
in the specific inactivation of all-trans-RA. Responsibl generation of several hydroxylated forms of RA, includin 4-oxo-RA, and 18-OH-RA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDINE-20300913; PubMed=10823918; MEDINE-20300913; PubMed=10823918; White J.A., Ramshaw H., Taimi M., Stangle W., Zhang Creighton S., Tam S.-P., Jones G., Petkovich M.; "Identification of the human cytochrome P450, P450RA predominantly expressed in the adult cerebellum and all-trans-retinoic acid metabolism.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C26A_HUMAN

RI Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.

Submitted (SEP-1999) to the EMBL/GenBank/DDBJ databases.

C: I-FUNCTION: Plays a key role in retinoic acid metabolism. Appears to be involved in the specific inactivation of all-trans-RA.

CC be involved in the specific inactivation of all-trans-RA.

CR Responsible for generation of several hydroxylated forms of RA,

CC including 4-OH-RA, 4-oxo-RA, and 18-OH-RA.

CC :- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.

CC :- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.

CC :- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.

CC :- DEVELOPMENTAL STACE: Expressed at stage 7 ints expression

CC decreases in the anterior part of the embryo. From stage 7-10 its

CC decreases in the anterior part of the embryo. From stage 7-10 its

CC expression is restricted to the dorsal folds of the neural tube

CC and to rhombomere 2. At stage 10, it is expressed in the lateral

CC disappears in the neural tube, followed by a confined expression

at stage 12 to dorsal neural tube and at stage 15 an increasing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This SWISS-PROT entry is copyright. "Expression of cytochrome P450RAI (CYP26) in human fetal hepatic and cephalic tissues.";

Blochem. Blophys. Res. Commun. 252:487-491(1998).

-1- FUNCTION: Plays a key role in retinoic acid metabolism. Acts on retinoids, including all-trans-retinoic acid (RA) and its stereoisomer 9-cis-RA. Capable of both 4-hydroxylation and 18-hydroxylation. Responsible for generation of several hydroxylated forms of RA, including 4-0H-RA, 4-oxo-RA, AND 18-0H-RA.

-1- SUBCELLULAR LOCATION: Membrane-bound. Endoplasmic reticulum.

-1- TISSUE SPECIFICITY: Highest Levels in adult liver, heart, and the strength of the heart of the hear
